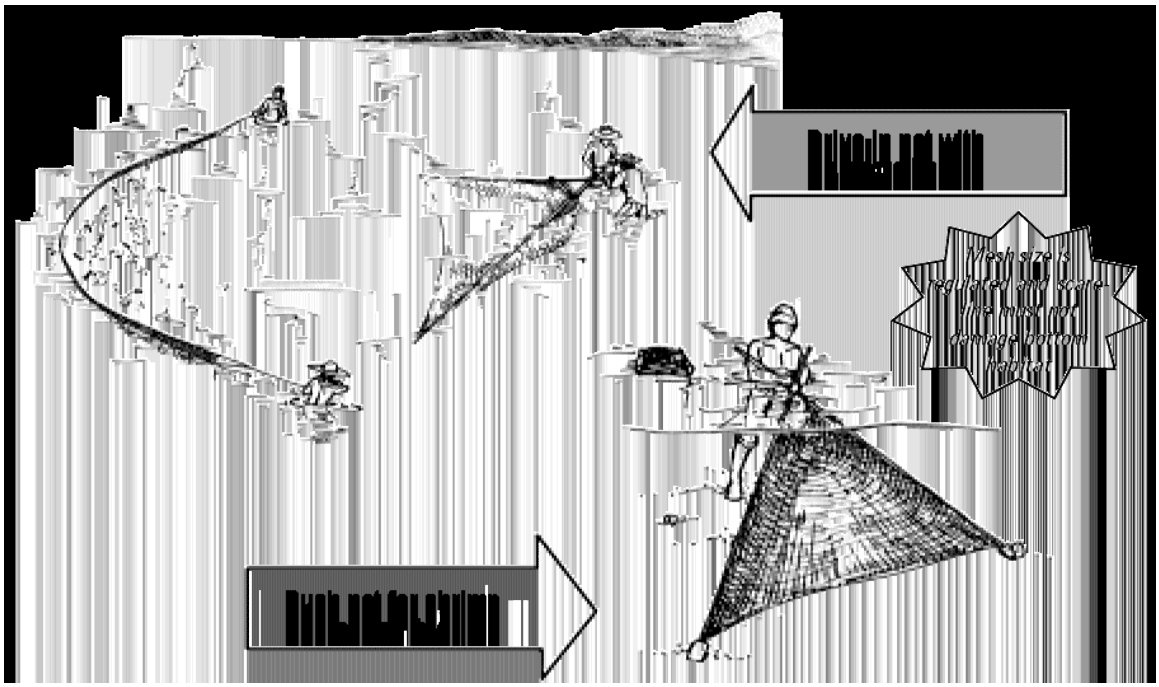
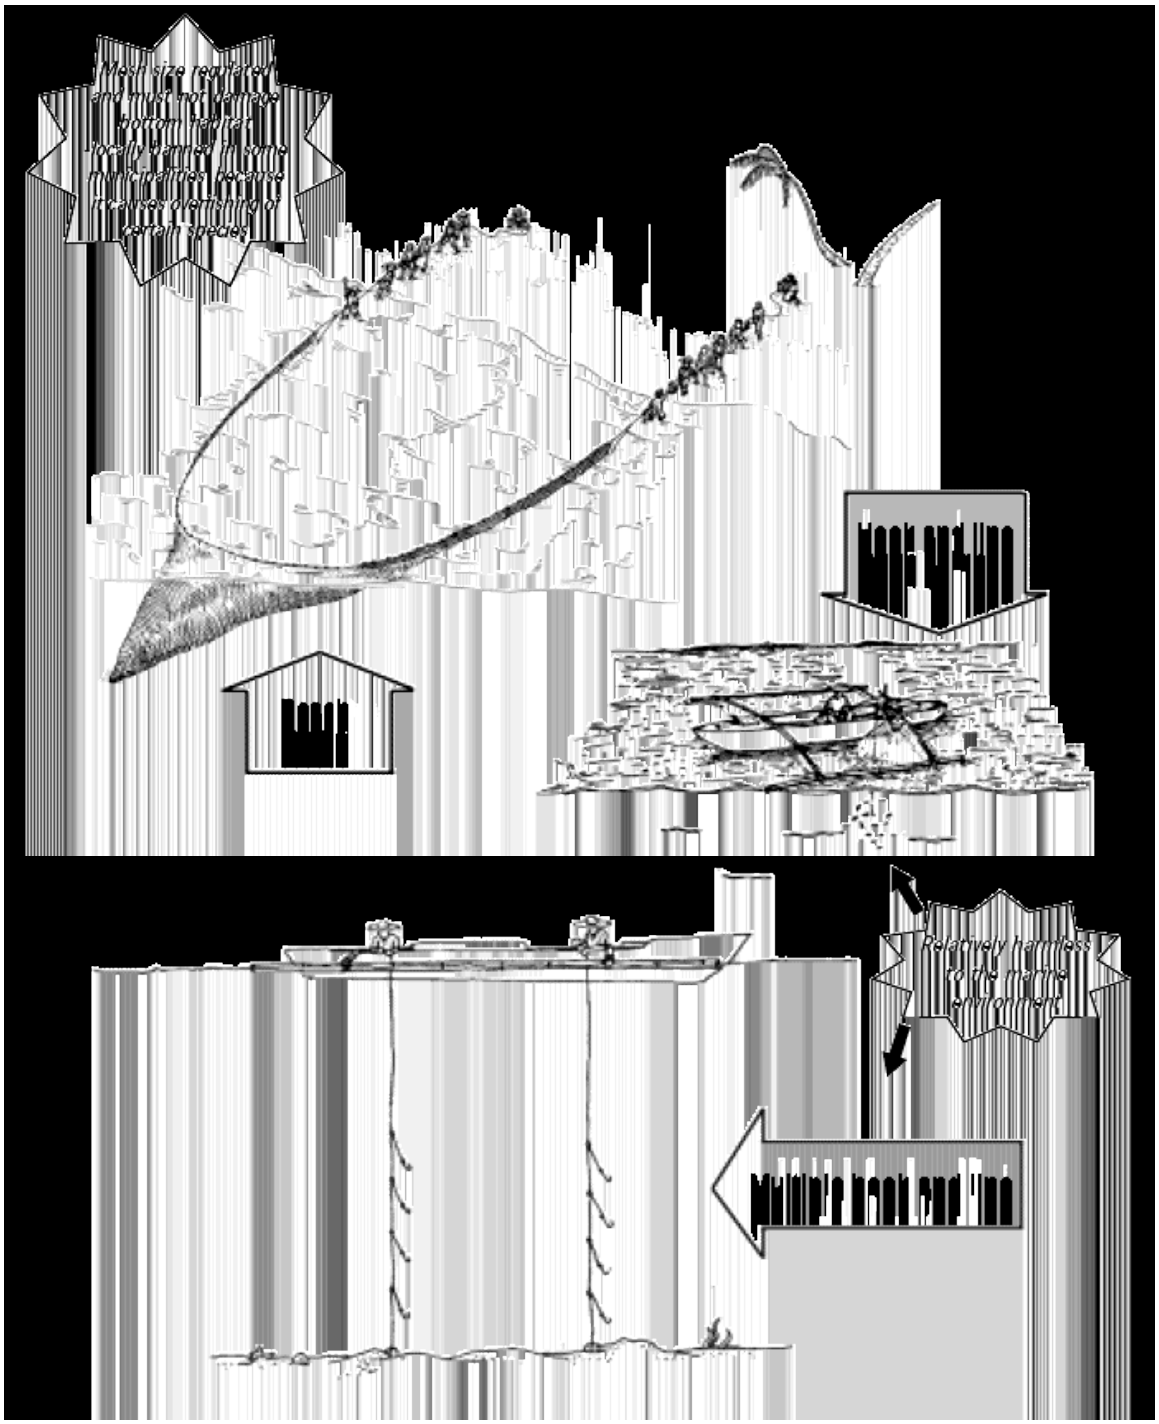
HANDOUT 9.3—SOME SOUTHEAST ASIAN FISHING METHODS

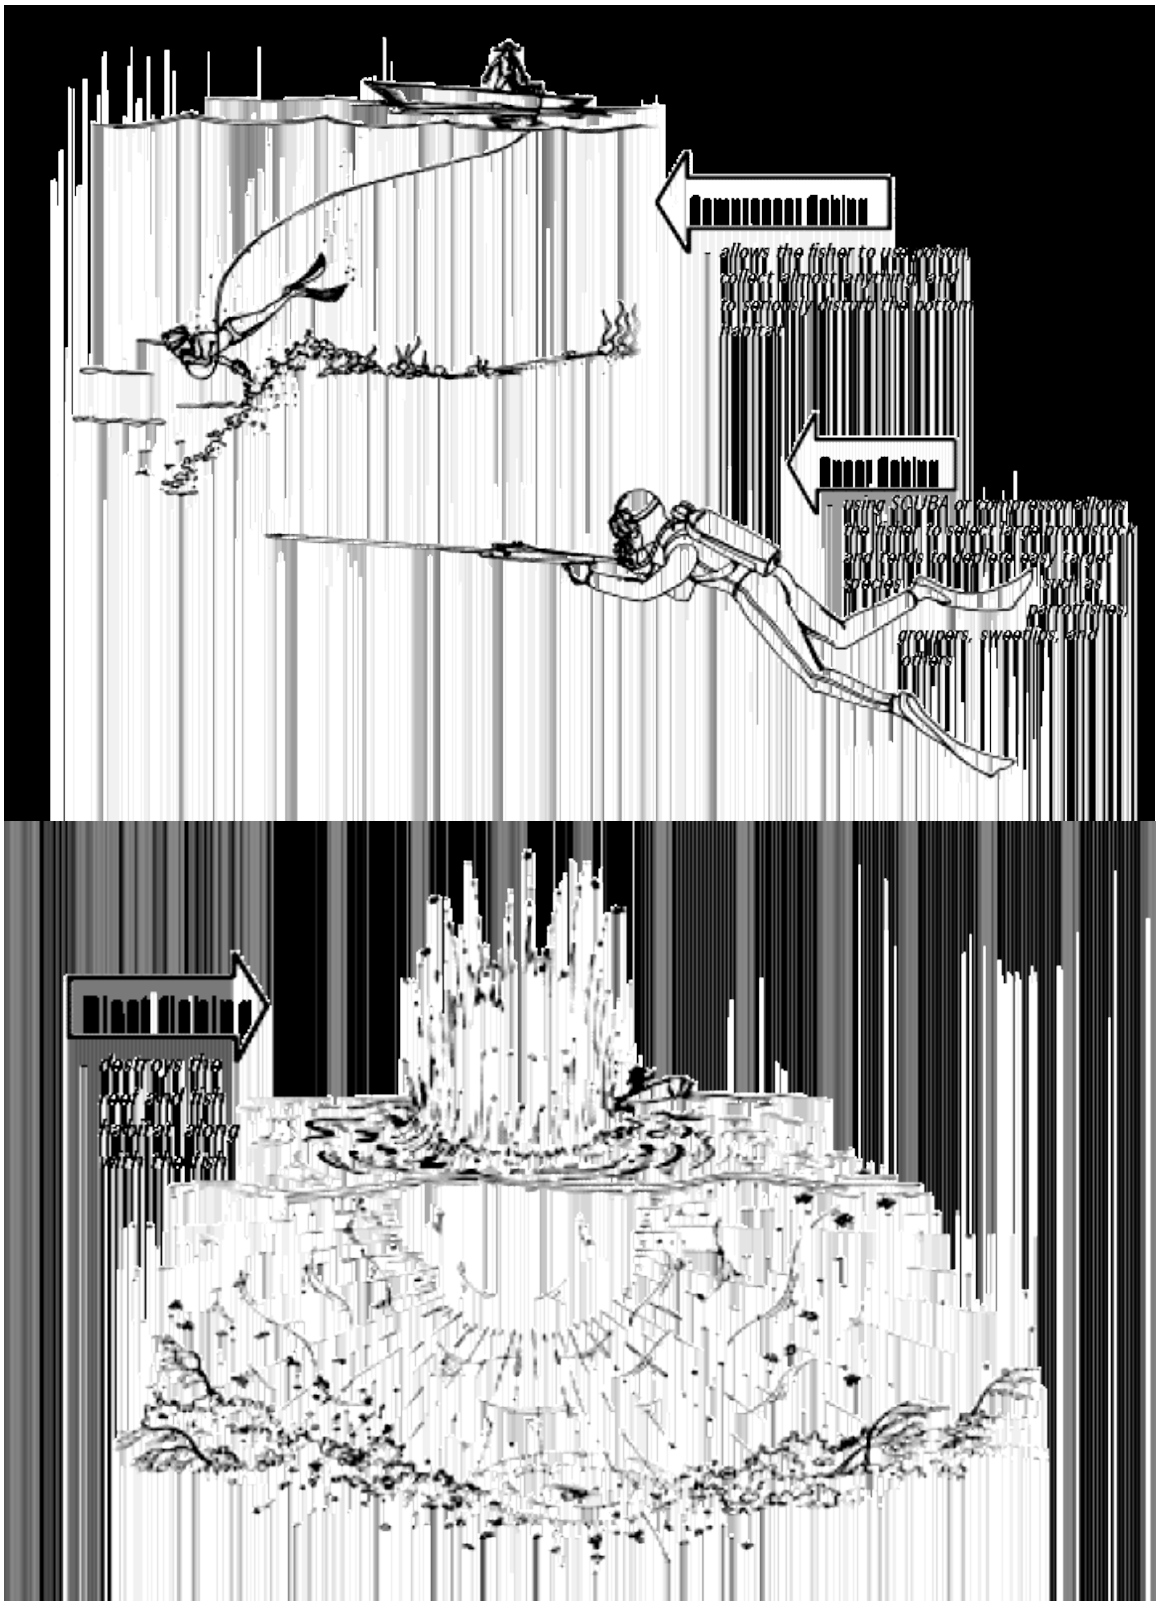


(PH-6, 2001)



Mesh size regulated and must not damage bottom habitat
Locally harmful in some multi-gear fisheries
Increases overfishing of certain species
Relatively harmless to the marine environment

(PHIL-6, 2001)



- allows the fisher to use poison, collect almost anything, and to seriously disturb the bottom habitat
- using SCUBA or Hunters so allows the fisher to select targeted stock and tends to deplete easy target species
groupers, sweetlips, and others
- destroys the feet and fish habitat along with the fish

(PHIL-6, 2001)
